

FOR **INCREASED**
SECURITY OF CASH
AND VALUABLES
IN HOME OR OFFICE
ENVIRONMENTS

Alpha Plus safes are designed to offer higher levels of protection than the lighter Alpha range of safes. Alpha Plus safes have a double steel wall construction with the void between filled with a fire-retardant mineral wool. As with all Chubb safes, Alpha Plus safes are designed to be securely base-or-rear-anchored using the fixing kit supplied, preventing unauthorised removal.

ALPHA PLUS

BURGLARY-RESISTANT PROTECTION

KEY FEATURES

- Double-skinned safe for securing cash, jewellery and valuables around the home or office
- Can be easily installed in the home without specialised tools

- Internal LED lighting on all electronic locking models
- Electronic models all feature motorised open/closing
- External emergency power connection should battery power fail
- Emergency key override facility in the unlikely event of total electronic failure
- Tamper-evident keypad
- Ready for base and or rear fixing, supplied with four expansion anchors
- Inner base carpet

ALPHA PLUS

PRODUCT SPECIFICATIONS

Model	EXTERNAL (mm)				INTERNAL (mm)			Volume (litres)	Weight (kg)	Shelf
	Height	Width (A)	Depth (C)*	Depth with door open 90° (B)	Height	Width	Depth			
Sz 2	270	350	345	640	200	280	255	14	22	1
Sz 3	320	440	395	780	250	370	305	28	32	1
Sz 6	610	460	395	800	540	390	305	64	53	1

Dimensions exclude handle and hinge projections. * In electronic models, add 25mm to allow for keypad projection.

CONSTRUCTION

The door is laser-cut from 6mm steel whilst the safe body is formed by a double layer of steel enclosing a fire retardant fill. The safe is powder-coated for long-lasting protection.

20mm diameter plated steel bolts secure the door effectively when locked.

LOCKS

KEY LOCK

Alpha Plus key lock safes are secured and opened by turning the key. The 8 lever, double-bitted key lock used is supplied with two identical keys.

ELECTRONIC LOCK

Alpha Plus electronic lock safes are fitted with a programmable touch-screen lock incorporating patented technology which can accept two independent codes of between 4 and 8 digits. Once programmed, should three consecutive attempts to enter an incorrect code be made, the lock will go into sleep mode for one minute. Three

further consecutive incorrect attempts will result in a five-minute time out.

Audio and visual confirmations during use ensure that the lock's status is easily understood.

A visual low battery warning prompts the user to change batteries when required.

The anti-tamper vibration alarm is armed by the user as and when required. Once set, an audible alarm is triggered should the safe be physically attacked.
